

VIKASH KUMAR

Android / Mobile App Developer

Vikashroy276@gmail.com | +91 94712 35283 | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Android Developer with 3+ years of experience building and publishing enterprise-grade mobile applications using Kotlin, Java, Jetpack, and MVVM architecture. Delivered production apps for steel, oil & gas, logistics, and aviation clients including IndiGo and Air India Express, with hands-on IoT-style device integration (BLE, RFID, Barcode/QR, Zebra SDK) and cloud back-end integration through REST APIs and JWT authentication. Working knowledge of React Native and ReactJS for cross-platform development, with foundational iOS knowledge. Experienced in Play Store deployment, Git-based workflows, and collaborating with client stakeholders to turn business requirements into usable mobile apps.

CORE TECHNICAL SKILLS

- **Mobile Development:** Kotlin (primary), Java, Native Android Development, Jetpack Compose, XML, Android SDK, Material Design
- **Cross-Platform & Web:** React Native, JSON, Basic iOS knowledge
- **Architecture & DI:** MVVM, MVC, Dependency Injection with Hilt
- **IoT & Device Integration:** Bluetooth Low Energy (BLE), RFID, Barcode & QR Code Scanning, Zebra SDK, Honeywell Devices, GPS & Location Services, CameraX, camera2api
- **Cloud & API Integration:** RESTful API integration (Retrofit), cloud back-end services, Postman, JSON, Firebase
- **Security & Authentication:** JWT authentication, Firebase Authentication, authorization & session management, user input validation
- **Data, Storage & Concurrency:** Room (SQLite ORM), SharedPreferences, Kotlin Coroutines, Android Background Services, Broadcast Receivers
- **Back-End Familiarity:** Java, Spring MVC, Hibernate, MySQL, JSON
- **Process & Tools:** Git, GitHub, Agile-style iterative delivery, SDLC, Play Store app deployment & release management
- **Libraries:** Firebase Analytics, Google Maps SDK, ML Kit, Glide, Picasso

PROFESSIONAL EXPERIENCE

Android Developer (Jr. Software Developer) | *Maxworth Electronic Systems Pvt. Ltd.*

Delivered 7 production Android applications for enterprise clients in steel, oil & gas, logistics, and aviation (IndiGo, Air India Express), covering IoT/hardware integration, cloud back-end connectivity, and Play Store deployment.

iSMART — Indian Oil Corporation Limited (Delhi HQ)

- Engineered and maintain a production inventory-tracking application deployed on Zebra rugged devices across two live sites — the Indian Oil refinery in Paradip and the Panipat warehouse.
- Built RFID tag and barcode scanning workflows to track polymer pallets, feeding scanned data into the client's EWM and YAS backend modules for real-time inventory reconciliation.
- Developed truck load start/stop tracking using MVVM architecture and Room database, reducing manual load-logging steps at the warehouse.
- Delivered onsite at the client location, working with Indian Oil stakeholders to turn warehouse workflow needs into app features.

Tech Stack: Kotlin, Zebra SDK, RFID, QR Code, MVVM, Room, View Binding, Retrofit

Indus ASN — Indus (Gurugram HQ)

- Developed an Android application for QR-based item tracking, packing, and package linking with ASN (Advance Shipping Notice), supporting dispatch operations across inbound and outbound processes.

Tech Stack: Kotlin, Jetpack Compose, MVVM, Hilt, Coroutines, StateFlow, Retrofit, QR Code

Pax Exit System — Air India Express, Indigo Airlines

- Built an Android application that streamlines passenger exits through airport security zones such as PESC and the departure hall, helping operations staff manage exits across multiple terminal gates via QR code scanning.
- Implemented MVVM architecture with Room database for reliable offline data capture in a live airport operations environment, supporting a smooth, hassle-free exit experience for passengers.

Tech Stack: Kotlin, Zebra SDK, QR Code, MVVM, Room, View Binding, Retrofit

Prohibited Baggage System — Air India Express, Indigo Airlines

- Developed an application enabling airport staff to log and manage prohibited baggage items using QR code scanning, streamlining a previously manual compliance process.

Tech Stack: Kotlin, Zebra SDK, QR Code, MVVM, Room, View Binding, Retrofit

BLETMS — Bluetooth Track Management System

- Built a Bluetooth Low Energy (BLE) IoT feature that lets users scan for a BLE tag, locate the device, ring it, and check its power status from the app.
- Integrated Zebra SDK for secure document reading and architected the app with Jetpack Compose, Hilt dependency injection, and MVVM.

Tech Stack: Kotlin, Jetpack Compose, Hilt, MVVM, BLE, Zebra SDK, Retrofit

SATS Arrow — Singapore Air Terminal Services

- Developed a cargo-monitoring application for capturing Unit Load Device (ULD) images using CameraX, supporting SATS Arrow's cargo tracking operations.
- Implemented JWT-based authentication for secure back-end access and local persistence with Room database to support reliable image capture and sync.

Tech Stack: Kotlin, Java, CameraX, Room, JWT, Retrofit, Glide

Tata Steel Limited — Pipe Quality Traceability

- Built an Android application for pipe quality testing and traceability using RFID, replacing manual quality-tracking steps on the production floor.
- Developed real-time monitoring dashboards giving quality-control staff live visibility into testing status.

Tech Stack: Kotlin, Retrofit, Zebra SDK, View Binding, Fragments

Software Developer | Intuition Payment Systems

IVEPOS — Cloud-Based POS System

- Developed expense management modules and dashboard UI for a cloud-based point-of-sale platform.
- Built backend services using Java, Spring MVC 5.4, and Hibernate, with MySQL as the data layer.
- Contributed to front-end features using Bootstrap, HTML5, and JavaScript.

Tech Stack: Java, Spring MVC, Hibernate, MySQL, Bootstrap, HTML5, JavaScript

EDUCATION

Bachelor of Science in Computer Application (BSc. IT)

Magadh University, Bihar, Patna

Senior Secondary Certificate Examination

BSEB, Bihar, Patna

Secondary Certificate Examination

BSEB, Bihar, Patna
