

VIKASH KUMAR

Android Developer

Vikashroy276@gmail.com | +91 94712 35283 | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Android Developer with 3+ years of experience building enterprise-grade, hardware-integrated Android applications using Kotlin, Java, Jetpack, and MVVM architecture. Delivered production apps for clients across steel manufacturing, oil & gas, logistics, and aviation, working extensively with rugged Zebra Android devices, RFID, Barcode/QR scanning, and Bluetooth Low Energy (BLE) integrations — device-level work directly relevant to POS and field-hardware environments. Comfortable owning features end-to-end: REST API integration (Retrofit), local persistence (Room), dependency injection (Hilt), and Git-based version control, in fast-moving, client-facing delivery settings.

CORE TECHNICAL SKILLS

Languages & Frameworks: Kotlin (primary), Java, Native Android Development, Jetpack Compose, XML, Android SDK

Architecture & DI: MVVM, MVC, Dependency Injection with Hilt, Clean Architecture principles

Networking & APIs: RESTful API integration (Retrofit), Postman (API testing), JWT authentication, third-party API/SDK integration

Hardware & Device Integration: RFID, Barcode & QR Code Scanning, Bluetooth Low Energy (BLE), Zebra SDK, Honeywell Devices, rugged/handheld Android devices, GPS & Location Services, CameraX

Data & Storage: Room (SQLite ORM), SharedPreferences, Internal/External Storage

Concurrency & Services: Kotlin Coroutines, Android Background Services, Broadcast Receivers

Process & Tools: Git, GitHub, Agile-style iterative delivery (sprints/standups in client teams), SDLC

Cloud & Libraries: Firebase Authentication & Analytics, Google Maps SDK, ML Kit, Glide, Picasso

PROFESSIONAL EXPERIENCE

Android Developer (Jr. Software Developer) | *Maxworth Electronic Systems Pvt. Ltd.*

Delivered 6 production Android applications across enterprise clients in steel, oil & gas, logistics, and aviation sectors, working directly with rugged Zebra hardware and client-specific backend systems.

iSMART — Indian Oil (Delhi HQ)

- Engineered and maintain a production inventory-tracking application deployed on Zebra rugged devices across two live sites — the Indian Oil refinery in Paradip and the Panipat warehouse.
- Built RFID tag and barcode scanning workflows to track polymer pallets, feeding scanned data into the client's EWM and YAS backend modules for real-time inventory reconciliation.
- Developed truck load start/stop tracking functionality using MVVM architecture and Room database, reducing manual load-logging steps at the warehouse.

Tech Stack: Kotlin, Zebra SDK, RFID, QR Code, MVVM, Room, View Binding, Retrofit

Pax Exit System — Air India Express, Bengaluru International Airport

- Built an Android application used by airport operations staff to track and manage passenger exits across multiple terminal gates via QR code scanning.
- Implemented MVVM architecture with Room database for reliable offline data capture in a live airport operations environment.

Tech Stack: Kotlin, Zebra SDK, QR Code, MVVM, Room, View Binding, Retrofit

Prohibited Baggage System — Air India Express, Bengaluru International Airport

- Developed an application enabling airport staff to log and manage prohibited baggage items using QR code scanning, streamlining a previously manual compliance process.

Tech Stack: Kotlin, Zebra SDK, QR Code, MVVM, Room, View Binding, Retrofit

BLETMS — Bluetooth Track Management System

- Built a Bluetooth Low Energy (BLE) application enabling users to discover paired devices, trigger device ringing, and monitor real-time power status — direct experience with short-range wireless device pairing and communication, the same category of skill used in BLE-based POS/EMV terminals.
- Integrated Zebra SDK for secure document reading and architected the app with Jetpack Compose, Hilt dependency injection, and MVVM.

Tech Stack: Kotlin, Jetpack Compose, Hilt, MVVM, BLE, Zebra SDK, Retrofit

SATS Arrow — Singapore Air Terminal Services

- Developed a cargo-monitoring application for capturing Unit Load Device (ULD) images using CameraX, supporting SATS Arrow's cargo tracking operations.
- Implemented JWT-based authentication and local persistence with Room database to support reliable image capture and sync.
Tech Stack: Kotlin, Java, CameraX, Room, JWT, Retrofit, Glide

Tata Steel Limited — Pipe Quality Traceability

- Built an Android application for pipe quality testing and traceability using RFID, replacing manual quality-tracking steps on the production floor.
- Developed real-time monitoring dashboards giving quality-control staff live visibility into testing status.
Tech Stack: Kotlin, Retrofit, Zebra SDK, View Binding, Fragments

Software Developer | Intuition Payment Systems

IVEPOS — Cloud-Based POS System

- Developed expense management modules and dashboard UI for a cloud-based point-of-sale (POS) platform — direct exposure to POS software workflows, though on the backend/dashboard side rather than payment-card hardware integration.
- Built backend services using Java, Spring MVC 5.4, and Hibernate, with MySQL as the data layer.
- Contributed to front-end features using Bootstrap, HTML5, and JavaScript.
Tech Stack: Java, Spring MVC, Hibernate, MySQL, Bootstrap, HTML5, JavaScript

EDUCATION

Bachelor of Science in Computer Application (BSc. IT) — Magadh University, Bihar, Patna

Senior Secondary Certificate Examination — BSEB, Bihar, Patna

Secondary Certificate Examination — BSEB, Bihar, Patna
